

AUGNITO

EMPOWERING YOU TO DELIVER OUTSTANDING CARE

A new clinical voice solution built on a 20-year partnership with the NHS.

Augnito streamlines clinical workflows with secure, accurate, cloud-based AI speech recognition, available everywhere you need it.

Putting patients first

Every healthcare professional wants to deliver the highest level of care for each patient, backed by relevant, timely information and detailed records. Preparing clinical documents, waiting for transcription and inputting into patient reports takes time and resources away from this key priority.

It becomes a challenge that intensifies as workflows become more complex, where clinicians and healthcare professionals face ever-increasing pressure.

Speech recognition – unlocking its benefits

AI-powered speech recognition technology offers a fast, easy and accurate alternative to waiting for manual transcription. Using your voice to drive software applications, or devices, that provide you with quicker clinical documentation outputs sounds like the right solution – but does it come with compromises? You'll know, better than anyone, that clinicians need dependable technology that's out-of-the-box ready to support medical vocabulary, adjust to the way you work, and be able to seamlessly integrate into existing workflows and clinical systems.

A speech recognition solution that's the perfect fit for how and where you actually work – allowing you to unlock all its benefits without compromising on cost, hardware/systems compatibility, time, training, security and compliance.

A solution that doesn't burden your already exhausting workload.

Designed by clinicians to empower clinicians

Developed by the Scribetech team with over 20 years' experience in NHS transcription, and underpinned by human-centred clinician design to create a Natural Language Processing (NLP) engine, Augnito is a focused voice-driven technology that makes a measurable impact on how you turn medical information into clinical documentation, from its first use.

Available simultaneously across desktops, mobile devices and web browsers, Augnito provides you with a 'portable' secure, cloud-based, speech-to-text interface and 99% accuracy directly at-the-cursor.

It is platform-agnostic and supports a wide range of medical speciality vocabularies without the need for voice profile training.

As a result, your clinical reporting and admin time can be cut by 50%, eliminating the delays caused by waiting for transcriptions or manual data entry. With Augnito you can focus on patient care - not on your keyboard, or clinical documentation processes.

Designed to speech-enable clinical systems

An easy to integrate Application Programming Interface (API) and a unique software development kit (SDK), give healthcare technology businesses and clinical software developers the ability to efficiently add speech recognition, and voice-driven commands and controls, to their own clinical systems.

Empowering you to

Save up to an hour on admin every day with at-the-cursor speech recognition

Take speech recognition everywhere with desktop, mobile and in-browser access

Reinvest the time you save into delivering the highest standards of patient care

Integrate speech recognition into any clinical system and easily feed data back into patient records

Streamline your workflows with useful voice commands and time-saving macros

Start instantly with fast setup and no voice profile training

What makes Augnito different?

▲ Its development and design

built with clinicians' input at every step of the build-test-learn process.

▲ Its speciality specific models

supporting general medical vocabulary and multiple speciality language models, including radiology, histopathology and cardiology.

▲ Its customised text formatting

conveys clinical meaning based on your requirements and NHS guidelines.

▲ Its API and SDK

speech-enables your EPR or clinical systems.

▲ Its acoustic sensitivity and noise suppression technology

maintains clinical accuracy even in noisy speech input environments.

About Scribotech and Augnito

Scribotech (UK) Ltd is a clinical voice solutions innovator, fusing 20 years of transcription and digital dictation services to the NHS, speech-to-text and clinical coding solutions for the healthcare sector, and its own speech recognition engine and advanced AI voice technology.

For two decades, Scribotech has consistently delivered accurate, efficient, cost-effective services and technology to support clinical transcription. Now, the team has combined this experience with 8 years of research and development, including 2 million hours of input from strategists, scientists, analysts, engineers and clinicians. The result is Augnito: a secure, cloud-based and AI-driven clinical speech recognition product suite.

Scribotech is fully certified for the Data Security and Protection Toolkit and Cyber Essentials+. Its security, quality control and management processes are UKAS certified ISO 9001 & ISO 14001, and ISO 27001 for information security management.
